                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      comprising amino acids 332-371 of human prostate-specific PS118 polypeptide (see AAM50809). A PS118 consensus sequence (see ABA91651) is found at least 12 times more often in prostate tissue. PS118 polypeptides, polymucleotides, in non-prostate tissue. PS118 polypeptides, polymucleotides, admitibodies, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostatitis, prostate cancer, tumours and metastases. The PS118 polypeptides can be produced by expression of PS118 polymucleotides in transfected host calls, and immunogenic peptides are useful for raising PS118-specific antibodies of diagnostic use. The methods and reagents of the prostate and may provide an early means of detecting diseases of the between the clinically important and unimportant prostate cancers without the use of surgery.

The clones were identified from a cDNA library made from prostate tumour tissue. Recombinant PS18 protein is used to detect PS118 specific antibodies, to raise antibodies for detection of PS118 antigens, to screen for specific binding agents (potential therapeutics, and to isolate specific antibodies from serum. Detection of PS118 protein or mucleic acid, which are prostate related, and altered or elevated in prostatic disease, is used for detection, diagnosis, staging, monitoring and prognosis of prostatic disease, particularly cancer, and to identify subjects at

These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.
                       preventing or treating or disease -
                                          Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognostic preventing or treating or determining predisposition to prostate
                                                                                                                                                                                                                                                                                                                                                                                                       (GRAN/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of a human prostate-specific PS118
CC polypeptide, as predicted from a partial consensus cDNA sequence
CC (see BAB31651), and lacking the N-terminal region. The PS118
CC consensus sequence is found at least 12 times more often in
CC prostate than in non-prostate tissue. PS318 polypeptides,
CC including derivatives of the present sequence, polynucleotides,
CC antibodies, agonists and inhibitors are useful for detecting,
CC diagnosing, staging, monitoring, prognosticating, preventing and
CC treating (including by genetic immunisation), or determining the
CC prostate, such as benign prostatic hyperplasia, prostatitis,
CC prostate, such as benign prostatic hyperplasia, prostatitis,
CC prostate, such as benign prostatic hyperplasia, prostatitis,
CC prostate such as benign prostatic cancer, tumours and
CC metastases. The PS118 polypeptides can be produced by expression
CC of PS118 polypucless in transfected host cells. The methods
CC and reagents of the invention may provide an early means of
CC detecting diseases of the prostate and may also provide new markers
CC which can differentiate between the clinically important and
CC unimportant prostate cancers without the use of surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC and gene mapping, and in recombinant production of (II). The Coplynucleotides are also used in diagnostics as expressed sequence tags are identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating the polypeptide and polymucleotide sequences have applications in the polypeptide and polymucleotide sequences have applications in the polypeptide and polymucleotide sequences have applications or diagnostics, forensics, gene mapping, identification of mutations to responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and the produce other types of data in products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human the sequence data for this partent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fig. in the polymphylpublished pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Loc

CC (AB099268-AB099608) and proteins (AB04682-AB065022). The sequences are
CC useful in therapeutic, diagnostic and research methods. The
CC polynuclectides may be used in the field of molecular biology as
CC polynuclectides may be used in the field of molecular biology as
CC hybridisation probes, primers for PCR, for chromosome and gene mapping,
CC for the recombinant production of protein, or in generation of anti-sense
CC DNA or RNA. The polynuclectides are useful in diagnostics as expressed
CC sequence tags (ESTs) for identifying expressed genes or for physical
CC markers, or as nutritional sources or supplements. The proteins may be
CC used to maintain and expand cell population in a totipotential or
CC puripotential state useful for re-engineering damaged or diseased
CC tissues, transplantation, manufacture of bio-pharmaceuticals or the
CC development of bio-sensors. The polynucleotides and proteins are useful
CC protein expression or biological activity, e.g. haematopoietic disorders,
CC central/peripheral nervous system diseases, mechanical and traumatic
CC disorders, non-healing wounds, immune deficiencies and disorders,
CC infectious diseases caused by viral, bacterial or fungal infection,
CC authormune diseases caused by viral, bacterial or fungal infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      autoimmune disorders, allergic reactions and conditions, coagulation disorders, or cancer. The polynucleotide sequences of the invention were assembled from ESTs isolated mainly by sequencing by hybridisation, and in some cases, sequences obtained from one or more public databases.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                             31-MAR-2000; 2000US-0540217.

(I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II) The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC afood supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. (CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostics mino acid sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
Claim 20; SEQ ID No 46871; 103pp; English
                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity -
                                                                                                                                                                                                             N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                  31-MAR-2000; 2000US-0540217.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II), (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical cimaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed cast for this patent did not appear in the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The colynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC the polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations in CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO or internation of internation of internations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC diagnostice, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences of the invention.
CC diagnostic amino acid sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO

                 The invention relates to novel polypeptides NOVX (NOV1-NOV8) and polypucleotides encoding them. The NOVX polypeptides can be expressed by standard recombinant methodology. The polypeptides, polynucleotides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), immune disorders (osteoarthritis), neurodegenerative disorders, Alzheimer's disease, pellepsy, hematopoletic disorders, inflammatory skin disease, epilepsy, hematopoletic disorders, inflammatory skin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kekuda R,

CC polypeptides may also be used as targets for the identification of small CC molecules that modulate or inhibit neurogenesis, cell differentiation, CC cell proliferation, haematopoiesis, wound healing and angiogenesis, in CC gene therapy, in generation of antibodies that bind immunospecifically to CC acids are further used as hybridization probes, in chromosome mapping, CC tissue typing, preventive medicine, and pharmacogenomics. The nucleic sequence represents a human NOV6b polypeptide.

Sequence 4959, Application US/09107532A
Patent No. 6583775
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
UTILE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                   GENERAL INFORMATION:
APPLICANT: GARY L. BETCON et al.
APPLICANT: GARY L. BETCON et al.
TITLE OF INVENTION: NUCLEIC ACID AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 6982
LENGTH: 212

       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score
